

Next Generation Contract Management

Strategic Contract Management System

The Strategic Contract Management System (SCMS) is effective, consistent, and nimble Public-Private Partnership (P3) contract management and oversight designed for government. This first of its kind, low-code, scalable application has been developed to enhance user performance and management oversight.

SCMS ENSURES THE RIGHT PEOPLE ARE DOING THE RIGHT THINGS AT THE RIGHT TIME.

Seamless Management across Tasks

SCMS creates and records the chain of actions related to each individual contract task in **one centralized location**. Streamlining actions to ensure all parties are engaged and creating a historical record with each action that can be leveraged by project managers decades into the future.

Intuitive and Customizable Interface

Users will have instant access to: Task, Search tools, Dashboards and reports, Learning and support resources, Document libraries, and more!

Comprehensive Business Intelligence

Users have the option to view status of P3 activities across the entirety of the Commonwealth, or drill down into District specific priorities.

Designed with an Eye Toward the Future

The low code design facilitates and simplifies the handoff from the design team to your IT departments, making it easier for your team to pick up the application and manage it in perpetuity. SCMS is built to be compliant with information requirements such as Information Security Standards 501, 525, and 508, using the same guiding principles as the U.S. Department of Defense.

Out with the old...

SCMS was conceived by the Virginia Department of Transportation (VDOT) Office of P3 to answer the challenges of a complex and growing portfolio of contracts. Business as usual was creating significant risks for VDOT's P3 contracts.

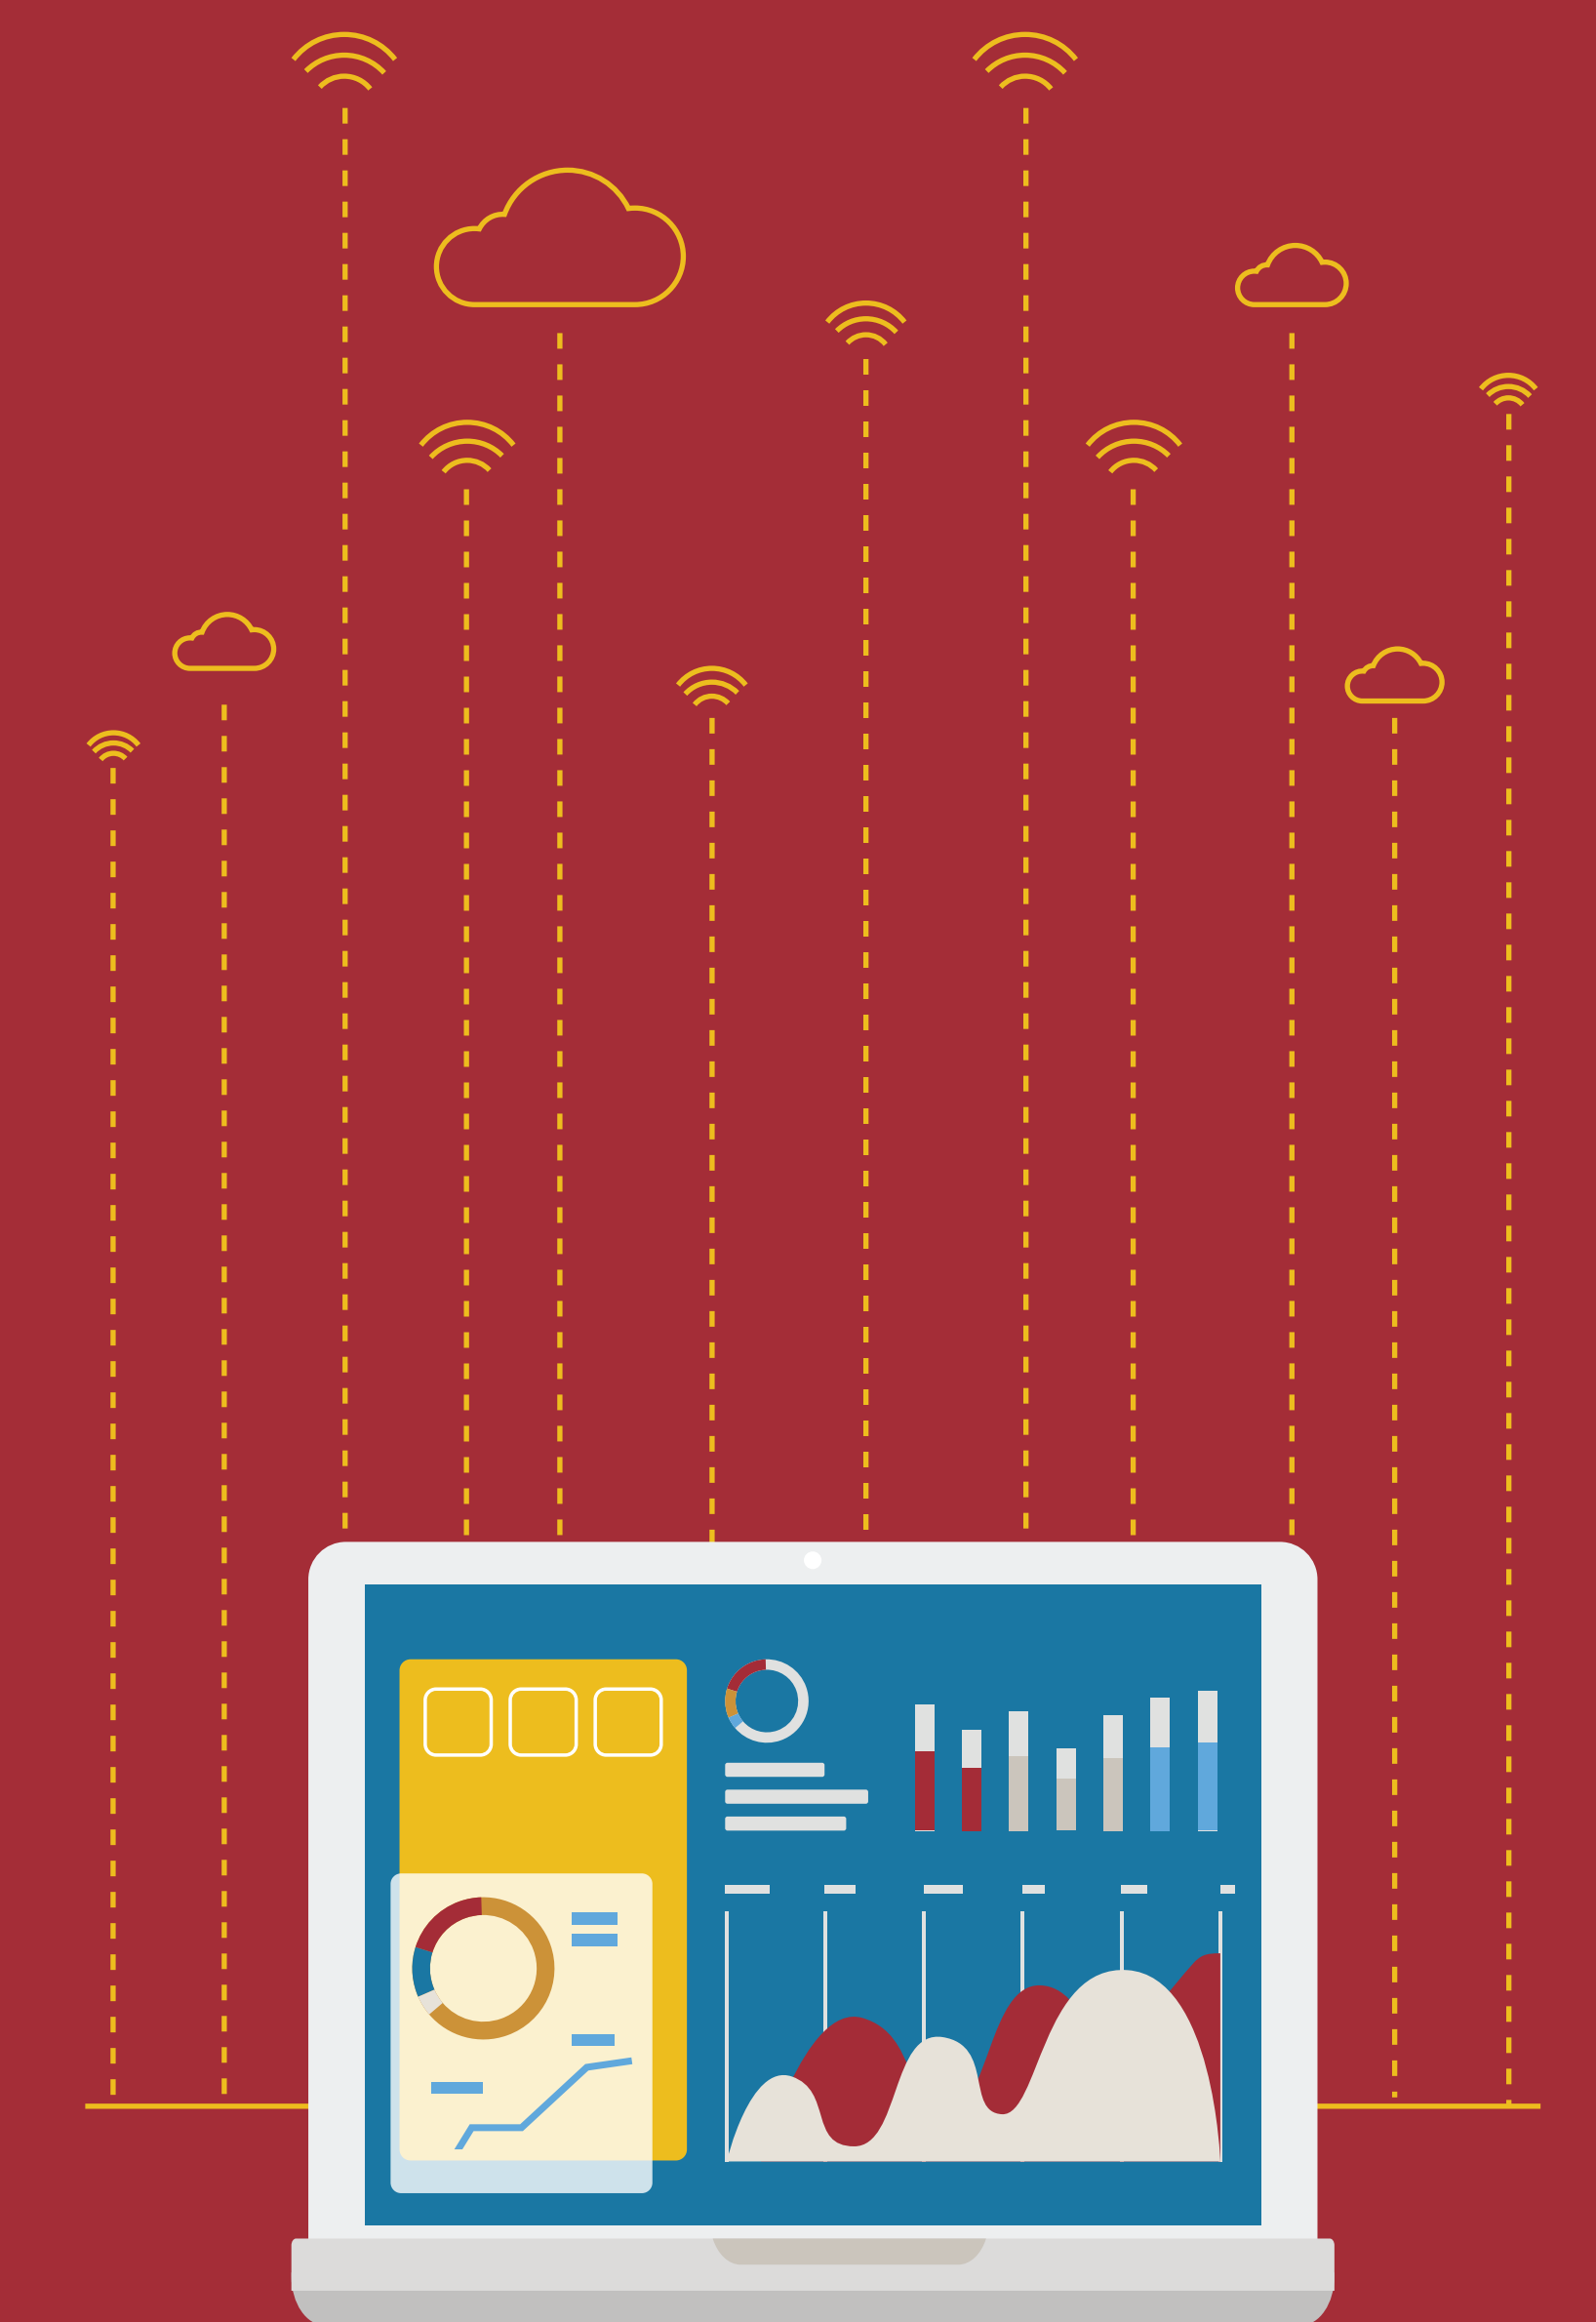

- X Inconsistent application of agreements
- X Undefined contract roles
- X Decentralized data and document storage
- X Inefficient management of a growing portfolio
- X Weak coordination between Central and District Offices

When a sufficient, cost effective solution could not be found the team decided to build a solution from the ground-up.

...And in with the new

The contract management challenges confronted by the Office of P3 are typical throughout VDOT and State Agencies across the country. For this reason, **SCMS was designed to be scalable across VDOT and beyond**. SCMS incorporates several core tenets that allow the application to standardize contract management while simultaneously allowing a high degree of customization across contracts.

- ✓ Standardized oversight
- ✓ Comprehensive monitoring and reporting
- ✓ Centralized data and document storage
- ✓ Seamless contract management
- ✓ Complete user support

Michael Gleasman-VDOT Project Manager

“What I like about SCMS is that it helps me to manage many different tasks across contracts. Dashboards allow me to quickly drill into the activities across my district and find problem areas before they become an issue, while task forms allow seamless and documented progression of activities. It has been a tremendous leap forward for how we manage our P3 contracts.”

Award Winning

In 2022 SCMS was awarded State IT Innovation of the Year for excellence in State Government technology by StateScoop.
